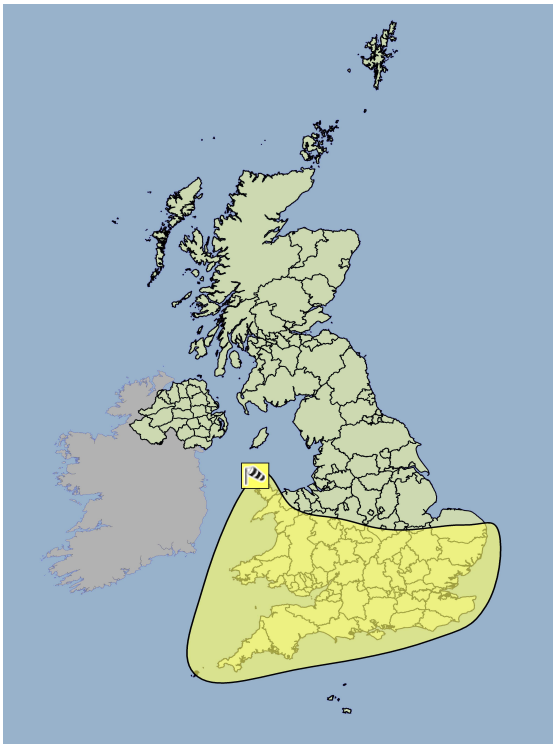
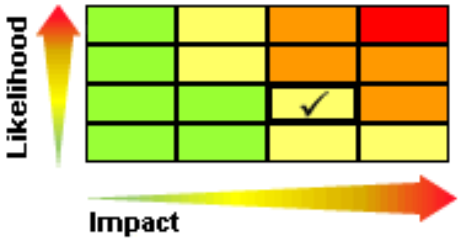
National Severe Weather Warning Service





Chief Forecasters Assessment
A deepening area of low pressure is likely to track east across southern Ireland and then central parts of the UK during Tuesday afternoon and evening, with a swathe of very strong winds potentially developing on the southern flank of the low. At this stage, the worst of the winds are expected to reach West Wales mid to late afternoon, sweeping rapidly eastwards during the evening. There remains a good deal of uncertainty in this evolution and particularly the location of the strongest winds, so this Warning will be kept under review and updated as necessary.

The Met Office have issued a **Yellow Alert** of **Wind**

Valid from **15:00 on Tue, 17th Nov 2015** until **23:30 on Tue, 17th Nov 2015**

West to southwesterly gales and locally severe gales are likely to sweep eastwards across parts of Wales, southern, central and eastern England later on Tuesday. Gusts could reach 60-70 mph inland and possibly 80 mph along exposed coasts, particularly Wales and through the Bristol Channel.

Be aware of the risk of disruption to travel and that gusts of this strength could bring down trees and lead to some damage to weakened structures.
